

DO channels — manifest-driven handling & monitoring by class

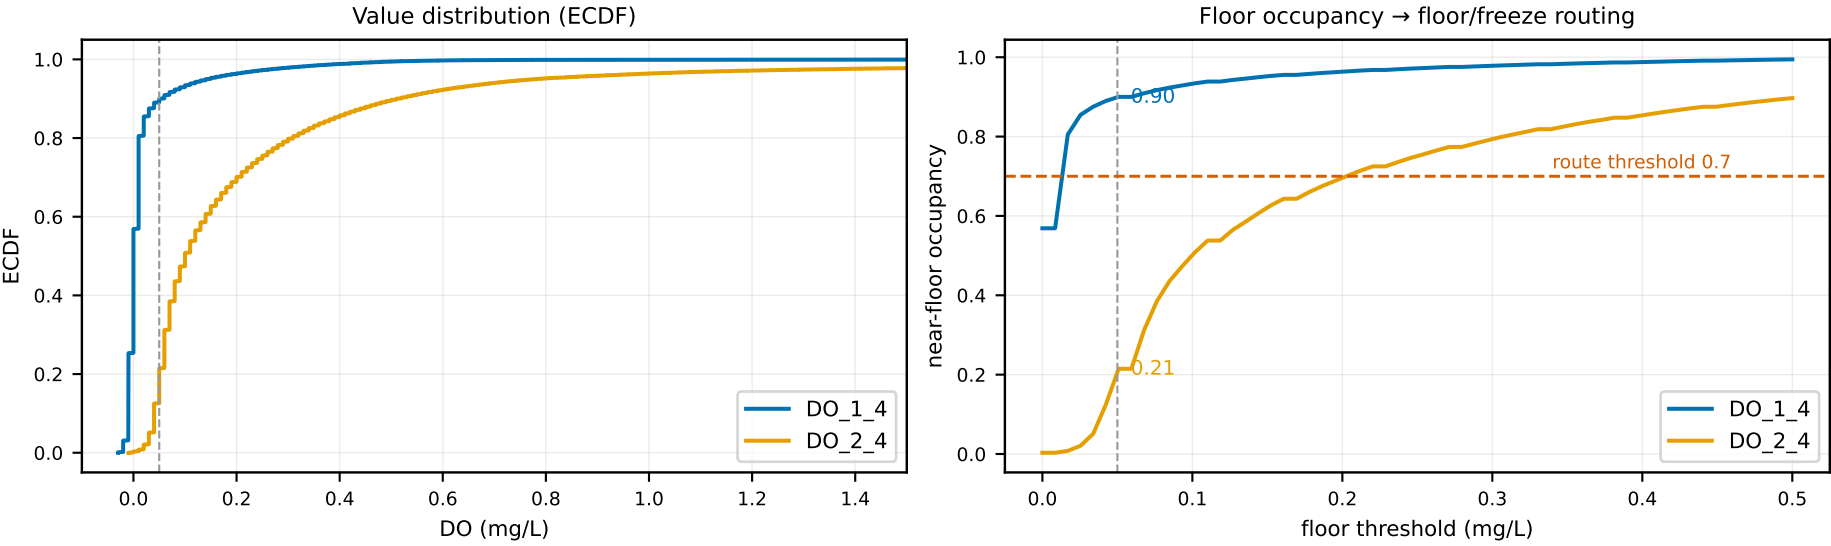

(a) Whitenened DO (iid) — ACF before/after whitening (lag 60)

(b) Near-unit-root DO (un-whitenable) — residual ACF (lag 120) + spectrum

(c) Post-anoxic DO — floor occupancy (censoring, not dynamics)

(d) D7 cross-channel redundancy — differential faults (common-mode drift → D5 anchor)
